Inclusivity and Indigeneity in Education for Sustainable Development Behera, Santosh Kumar, Ibrahim, Atyaf Hasan, Romdhani, Faten, 2024-06-03 A major issue globally revolves around the urgent need to reshape our education system aligning it with the ambitious

Sustainable Development Goals (SDGs) set to transform the world by 2030. These goals, comprising 17 distinct objectives and 169 targets, form an ambitious agenda that seeks to recalibrate the global landscape across social, economic, and environmental dimensions. Inclusivity and Indigeneity in Education for Sustainable Development stands as a catalyst for fostering dialogue on the interconnected realms of education, indigeneity, and sustainable development. It explores the relationships between these pillars and offers a comprehensive understanding of their transformative potential. The book emphasizes the essence of inclusivity, echoing the 'No one left behind' SDG agenda, which goes beyond mere academic discourse to foster fairness and justice. Additionally, it delves into the invaluable resource of indigenous knowledge transmitted orally across generations and its profound connection to sustainable development. By advocating for a shift in education, the book calls for an approach that ensures no one is left behind in the teaching and learning process. This paradigm shift is envisioned as a broad civilizational project connecting with marginalized communities and tapping into their distinct cultural resources for crafting resilient and sustainable strategies.

Too-Big-to-Fail in Banking Tom Filip Lesche, 2021-06-28. This book provides a comprehensive summary of the latest academic research on the important topic of too big to fail (TBTf) in banking. It explains TBTf from various perspectives, including the range of regulatory measures proposed to counter TBTf, most notably the globally accepted regulation of global systemically important banks (G-SIBs) and its main tool of capital surcharges. The empirical analysis quantifies the shareholder value of the G-SIB attribution by using quarterly observations from more than 750 global banks between Q2 2008 and Q3 2015. The main finding is that G-SIBs are confronted with a substantial relative valuation discount compared to non-G-SIBs. From the end of 2011 until the end of 2015, a stable discount of 0.6x to 0.8x price to tangible common equity (P/TCE) is statistically highly significant. The results suggest that the G-SIB designation effect, which positively impacts G-SIBs' share prices because of funding benefits from IGfGs, is dominated by the regulatory G-SIB burden effect, which negatively impacts G-SIBs' share prices because of lower profitability due to capital surcharges and other regulatory requirements placed on G-SIBs. The findings re-open the debate about whether breaking up G-SIBs would unlock shareholder value and whether G-SIBs are regulated efficiently.
