Two Millennia of Mathematics George M. Phillips, 2012-12-06 This book is intended for those who love mathematics including under graduate students of mathematics more experienced students and the vast number of amateurs in the literal sense of those who do something for the love of it I hope it will also be a useful source of material for those who teach mathematics It is a collection of loosely connected topics in areas of mathematics that particularly interest me ranging over the two millennia from the work of Archimedes who died in the year 212 Bc to the Werke of Gauss who was born in 1777 although there are some references outside this period In view of its title I must emphasize that this book is certainly not pretending to be a comprehensive history of the mathematics of this period or even a complete account of the topics discussed However every chapter is written with the history of its topic in mind It is fascinating for example to follow how both Napier and Briggs constructed their log arithms before many of

the most relevant mathematical ideas had been discovered Do I really mean discovered There is an old question Is mathematics created or discovered Sometimes it seems a shame not to use the word create in praise of the first mathematician to write down some outstanding result Yet the inner harmony that sings out from the best of mathematics seems to demand the word discover

Catalan Numbers with Applications Thomas Koshy, 2009 This book presents a clear and comprehensive introduction to one of the truly fascinating topics in mathematics Catalan numbers They crop up in chess computer programming and even train tracks In addition to lucid descriptions of the mathematics and history behind Catalan numbers Koshy includes short biographies of the prominent mathematicians who have worked with the numbers
