Direct and Large-Eddy Simulation IV Bernard Geurts, Rainer Friedrich, Olivier Métais, 2001-11-30 This volume contains the proceedings of the 2001 DLES4 workshop. It describes and discusses state of the art modeling and simulation approaches for complex flows. Fundamental turbulence and modeling issues but also elements from modern numerical analysis are at the heart of this field of interest.

High Performance Computing in Science and Engineering, Munich 2004 Siegfried Wagner, Werner Hanke, Arndt Bode, Franz Durst, 2005-12-06 Leading edge research groups in the field of scientific computing present their outstanding projects using the High Performance Computer in Bavaria HLRB Hitachi SR8000 F1 one of the top level supercomputers for academic research in Germany. The projects address modelling and simulation in the disciplines Biosciences Chemistry Chemical Physics Solid State Physics High Energy Physics Astrophysics Geophysics Computational Fluid Dynamics and Computer Science. The authors describe their scientific background, their resource requirements with respect to top level supercomputers and their methods for efficient utilization of the costly high performance computing power. Contributions of interdisciplinary research projects that have been supported by the Competence Network for Scientific High Performance Computing in Bavaria KONWIHR complete the broad range of supercomputer research and applications covered by this volume.

Modelling Fluid Flow János Vad, Tamás Lajos, Rudolf Schilling, 2013-04-17 Modelling Fluid Flow presents invited lectures, workshop summaries and a selection of papers from a recent international conference CMFF 03 on fluid technology. The lectures follow the current evolution and the newest challenges of the computational methods and measuring techniques related to fluid flow. The workshop summaries reflect the recent trends, open questions and unsolved problems in the mutually inspiring fields of experimental and computational fluid mechanics. The papers cover a wide range of fluids engineering including reactive flow, chemical and process engineering, environmental fluid dynamics, turbulence modelling, numerical methods and fluid machinery.

Recent Results in Laminar-Turbulent Transition Siegfried Wagner, Markus Kloker, Ulrich Rist, 2013-06-05 Methodic investigations of laminar turbulent transition in wall bounded shear flows under controlled conditions are essential for untangling the various complex phenomena of the transition process occurring in flows at practical conditions. They allow understanding of the instability processes of the laminar flow and thus enable the development of tools for flow control. On the one hand the laminar flow regime can be extended by delaying transition to reduce viscous drag and on the other hand large scale flow disturbances or transition can be forced in order to enhance momentum and mass exchange. Thus flow separation can be prevented or mixing of fuel and air in combustion engines enhanced for instance. The DFG Verbund Schwerpunktprogramm Transition a cooperative priority research program of universities, research establishments and industry in Germany has been launched in April 1996 with the aim to explore transition by a coordinated use, development and validation of advanced experimental techniques and theoretical numerical simulation methods binding together all the appropriate resources available in

Germany At the very beginning of the six year research period specifically selected test problems were to be investigated by various theoretical and experimental methods to identify and possibly rule out inadequate numerical or experimental methods With respect to experiments it was planned to use multi sensor surface measuring techniques the infrared measuring technique and particle image velocimetry PIV in addition to hot wire techniques to get instantaneous images of flows in sections on surfaces or within the complete flow field

High Performance Computing in Science and Engineering, Garching/Munich 2007 Siegfried Wagner,Matthias Steinmetz,Arndt Bode,Matthias Brehm,2008-10-22 For the fourth time the Leibniz Supercomputing Centre LRZ and the Com tence Network for Technical Scienti c High Performance Computing in Bavaria KONWIHR publishes the results from scienti c projects conducted on the c puter systems HLRB I and II High Performance Computer in Bavaria This book reports the research carried out on the HLRB systems within the last three years and compiles the proceedings of the Third Joint HLRB and KONWIHR Result and Reviewing Workshop 3rd and 4th December 2007 in Garching In 2000 HLRB I was the rst system in Europe that was capable of performing more than one Tera op s or one billion oating point operations per second In 2006 it was replaced by HLRB II After a substantial upgrade it now achieves a peak performance of more than 62 Tera op s To install and operate this powerful system LRZ had to move to its new facilities in Garching However the situation regarding the need for more computation cycles has not changed much since 2000 The demand for higher performance is still present a trend that is likely to continue for the foreseeable future Other resources like memory and disk space are currently in suf cient abundance on this new system
