## **EARTH SCIENCE FINAL EXAM QUESTION WITH 100% CORRECT ANSWER 2025/2026**

4 main layers - troposphere, stratosphere, mesosphere, thermosphere

Temperature of troposphere - temperature decreases as you go up in atmosphere

Temperature of stratosphere - temperatures are elevated due to greenhouse gases and the ozone layer

Temperature of mesosphere - temperatures drop rapidly due to loss of heat

Temperature of thermosphere - temperatures are elevated due to the sun's radiated energy (heat)

Temperature - the measurement of the current thermal reading of a substance

Heat - form of energy that can be transferred

Seasonality - Seasons are present because the earth rotates on a tilted axis which is sometimes pointed towards the sun (summer) and sometimes pointing away (winter)

States of matter for water - solid, liquid, gas - moving from solid to gas uptakes energy (latent heat), moving from gas to solid releases heat

Saturation - the amount of water that the surrounding air can hold

Humidity - Relative percentage of saturation in the air

Adiabatic cooling and heating - air expands and cools as it rises, and as air parcel rises it cools, water vapor condenses and forms clouds

Gorlewski, 2011-07-01 Students in public schools serving poor and working class students are inundated by the effects of high stakes examinations Teachers are demoralized and students suffer substandard curricular and pedagogical experiences These effects are articulated by students and teachers in the high school that provided the setting for the critical ethnography on which this text is based Teachers resent being judged on the basis of students' performance on standardized assessments They are deprofessionalized as their roles are oriented toward working class norms Students feel alienated by content that is meaningless and test based pedagogies that are disempowering While these findings are disturbing critical theory provides a foundation for seeking hope By incorporating inquiry and dialogue this theoretical framework opens a space where resistance can be revealed and examined In this case the study exposed glimmers of resistance spaces in the structure of schooling where students and teachers critique the system and suggest ways of subverting the negative effects of the neoliberal reforms through dialogic empowering culturally

responsive pedagogies Collective resistance achieved through dialogic pedagogies that build on understandings of resistance and power can cultivate theoretical and material spaces where a cycle of praxis can enhance possibilities for social justice To that end the conclusion is devoted to the implementation of critical dialogic approaches to literacies approaches intended to interrupt the hegemonic influences that perpetuate social reproduction by capitalizing on the potential for solidarity and collective agency among the students and teachers who populate and educate the working classes This book would interest teacher educators teachers and school administrators

**Course-Based Undergraduate Research** Nancy H. Hensel, 2023-07-03 Co published with the Council on Undergraduate Research Undergraduate research has long been recognized as a high impact practice HIP but has unfortunately been offered only to juniors and seniors and to very few of them often in summer programs This book shows how to engage students in authentic research experiences built into the design of courses in the first two years thus making the experience available to a much greater number of students Research that is embedded in a course especially general education courses addresses the issue of how to expand undergraduate research to all students Research has shown that students who have early experiences in undergraduate research are more likely to pursue further research prior to and after graduation This is also an issue of social justice because it makes the benefits of undergraduate research available to students who must work during the academic year and in the summer It is widely accepted that the skills developed through undergraduate research help prepare students for their future careers The book addresses all aspects of the topic including What are appropriate expectations for research in the first two years How to design appropriate course based research for first and second year students How to mentor a class rather than individual students How students can disseminate the results of their research Possible citizen science projects appropriate for the first

and second years Providing additional resources available to support course based research in the first two years Designed for faculty at four year and two year colleges and including examples from the sciences the social sciences and the humanities the strategies and methods described can be adapted to disciplines not specifically mentioned in the book Many faculty are hesitant to engage first and second year students in undergraduate research because they worry students don't know enough to conduct authentic research in their discipline because they worry about the time it will take to develop activities for these students and because they wonder how they can mentor a whole class of students doing research The authors have successfully dealt with these issues and provide examples of how it's done Earth Science, 1985
