**Environmental Modelling, Software and Decision Support** Anthony J. Jakeman, Alexey A. Voinov, Andrea E. Rizzoli, Serena H. Chen, 2008-09-11 The complex and multidisciplinary nature of environmental problems requires that they are dealt with in an integrated manner Modeling and software have become key instruments used to promote sustainability and improve environmental decision processes especially through systematic integration of various knowledge and data and their ability to foster learning and help make predictions This book presents the current state of the art in environmental modeling and software and identifies the future challenges in the field State of the art in environmental modeling and software theory and practice for integrated assessment and management serves as a starting point for researchers Identifies the areas of research and practice required for advancing the requisite knowledge base and tools and their wider usage Best practices of environmental modeling enables the reader to select appropriate software and gives the reader tools to integrate natural system dynamics with human dimensions

**Decision Support Systems in Agriculture, Food and the Environment: Trends, Applications and Advances** Manos, Basil, Matsatsinis, Nikolaos, Paparrizos, Konstantinos, Papathanasiou, Jason, 2010-06-30 As national and international concern over sustainable resources becomes more prevalent the need for decision support systems DSS increases The applicable uses of a successful system can assist in the sustainability of resources as well as the efficiency and management of the agri environment industry Decision Support Systems in Agriculture Food and the Environment Trends Applications and Advances presents the development of DSS for managing agricultural and environmental systems focusing on the exposition of innovative methodologies from web mobile systems to artificial intelligence and knowledge based DSS as well as their applications in every aspect from harvest planning to international food production and land management This book provides an in depth look into the growing importance of DSS in agriculture

**Spatial Decision Support Systems** Ramanathan Sugumaran, John Degroote, 2010-11-15 Although interest in Spatial Decision Support Systems SDSS continues to grow rapidly in a wide range of disciplines students planners managers and the research community have lacked a book that covers the fundamentals of SDSS along with the advanced design concepts required for building SDSS Filling this need Spatial Decision Support System

**Water Resources Planning** Andrew A. Dzurik, Tara Shenoy Kulkarni, Bonnie Kranzer Boland, 2018-10-17 Now in an extensively updated fourth edition, this essential text offers a comprehensive survey of all aspects of water resources planning and management. Utilizing an integrated water resources management (IWRM) framework, the authors show how this approach can clarify and help resolve resource management problems in ways that take into account complicated and interconnected social, economic, and environmental needs. Spanning the full planning process, the book considers legal and administrative issues, economic and forecasting factors, water quality, quantity, supply, use, and demand, and model applications. The authors' goal throughout is to provide a practical foundation for improving ecological and human environmental systems for practitioners and students alike.

**Model-Based Decision Support Methodology with Environmental Applications** Andrzej P. Wierzbicki, Marek Makowski, Jaap Wessels, 2000-05-31 The complexity of issues requiring rational decision making grows and thus such decisions are becoming more and more difficult despite advances in methodology and tools for decision support and in other areas of research. Globalization interlinks between environmental, industrial, social, and political issues, and rapid speed of change all contribute to the increase of this complexity. Specialized knowledge about decision making processes and their support is increasing, but a large spectrum of approaches presented in the literature is typically illustrated only by simple examples. Moreover, the

integration of model based decision support methodologies and tools with specialized model based knowledge developed for handling real problems in environmental engineering industrial economical social and political activities is often not satisfactory Therefore there is a need to present the state of art of methodology and tools for development of model based decision support systems and illustrate this state by applications to various complex real world decision problems The monograph reports many years of experience of many researchers who have not only contributed to the developments in operations research but also succeeded to integrate knowledge and craft of various disciplines into several modern decision support systems which have been applied to actual complex decision making processes in various fields of policy making The experience presented in this book will be of value to researchers and practitioners in various fields The issues discussed in this book gain in importance with the development of the new era of the information society where information knowledge and ways of processing them become a decisive part of human activities The examples presented in this book illustrate how various methods and tools of model based decision support can actually be used for helping modern decision makers that face complex problems Overview of the contents The first part of this three part book presents the methodological background and characteristics of modern decision making environment and the value of model based decision support thus addressing current challenges of decision support It also provides the methodology of building and analyzing mathematical models that represent underlying physical and economic processes and that are useful for modern decision makers at various stages of decision making These methods support not only the analysis of Pareto efficient solutions that correspond best to decision maker preferences but also allow the use of other modeling concepts like soft constraints soft simulation or inverse simulation The second part describes various types of tools that are used for the development of decision support systems These include tools for modeling simulation optimization tools supporting choice and user interfaces The described tools are both standard commercially available and nonstandard public domain or shareware software which are robust enough to be used also for complex applications All four environmental applications regional water quality management land use planning cost effective policies aimed at improving the European air quality energy planning with environmental implications presented in the third part of the book rely on many years of cooperation between the authors of the book with several IIASA projects and with many researchers from the wide IIASA network of collaborating institutions All these applications are characterized by an intensive use of model based decision support Finally the appendix contains a short description of some of the tools described in the book that are available from IIASA free of charge for research and educational purposes The experiences reported in this book indicate that the development of DSSs for strategic environmental decision making should be a joint effort involving experts in the subject area modelers and decision support experts For the other experiences discussed in this book the authors stress the importance of good data bases and good libraries of tools One of the most important requirements is a modular structure of a DSS that enhances the reusability of system modules In such modular

structures user interfaces play an important role The book shows how modern achievements in mathematical programming and computer sciences may be exploited for supporting decision making especially about strategic environmental problems It presents the methodological background of various methods for model based decision support and reviews methods and tools for model development and analysis The methods and tools are amply illustrated with extensive applications Audience This book will be of interest to researchers and practitioners in the fields of model development and analysis model based decision analysis and support particularly in the environment economics agriculture engineering and negotiations areas and mathematical programming For understanding of some parts of the text a background in mathematics and operational research is required but several chapters of the book will be of value also for readers without such a background The monograph is also suitable for use as a text book for courses on advanced Master and Ph D levels for programs on Operations Research decision analysis decision support and various environmental studies depending on the program different parts of the book may be emphasized
