Environment Modeling Based Requirements Engineering for Software Intensive Systems provides a new and promising approach for engineering the requirements of software intensive systems presenting a systematic promising approach to identifying clarifying modeling deriving and validating the requirements of software intensive systems from well modeled environment simulations In addition the book presents a new view of software capability i e the effect based software capability in terms of environment modeling Provides novel and systematic methodologies for engineering the requirements of software intensive systems Describes ontologies and easily understandable notations for modeling software intensive systems Analyzes the functional and non functional requirements based on the properties of the software surroundings Provides an essential practical guide and formalization tools for the task of identifying the requirements of software intensive systems Gives system analysts and requirements engineers insight into how to recognize and structure the problems of developing software intensive systems Proceedings, IEEE High-Assurance Systems Engineering Workshop, October 21-22, 1996, Niagara on the Lake, Ontario, Canada ,1997 This text explores high assurance software design and development It includes specification and testing of high assurance systems quality and high assurance concurrency and high assurance high assurance execution environments security and reliability and high assurance **Software Engineering--ESEC ...** ,1993 **Proceedings** ,1996 *Software Engineering--ESEC '93* Ian Sommerville, Manfred Paul, 1993 This volume contains the proceedings of the fourth European Software Engineering Conference It contains 6 invited papers and 27 contributed papers selected from more than 135 submissions The volume has a mixture of themes Some such as software engineering and computer supported collaborative work are forward looking and anticipate future developments others such as systems engineering are more concerned with reports of practical industrial applications Some topics such as software reuse reflect the fact that some of the concerns first raised in 1969 when software engineering was born remain unsolved problems The contributed papers are organized under the following headings requirements specification environments systems engineering distributed software engineering real time systems software engineering and computer supported collaborative work software reuse software process and formal aspects of software engineering PUBLISHER S WEBSITE Proceedings of the Fourteenth International Conference on Information Systems ,1993 *Requirements Engineering Project-Based Learning Model Using the Electronic Learning Software Engineering System (ELINS)* Nor Azliana Akmal Jamaludin, 2015-09-21 Doctoral Thesis Dissertation from the year 2014 in the subject Computer Science Software grade Pass University of Technology Malaysia Faculty of Computing course Software Engineering Education language English abstract The success of software project depends on how well it fits the needs of its user and its environment This research strongly believes that future Requirement Engineering RE engineers should have the necessary generic skills in order to improve the

quality of producing Software Requirement Specification The software industry claims that the software engineering graduates are not able to meet their requirements for employability Thus confronting the problems right from the Higher Learning Education level that lead to this disparity will save the software industry the cost of sending new employees for additional training The objectives of this research are to develop new learning environment model that can be implemented in RE education construct a prototype namely Electronic Learning Software Engineering System ELINS that allows the industry educators and Software Engineering SE undergraduate students to actively communicate and collaborate and measure the effectiveness of the proposed learning model in teaching RE and enhancing the generic skills of SE undergraduates This research comprises of pilot and main study to gather the requirement from experience of software industry personnel before evaluating the students after they involve in experimental test The interview findings from the pilot study provided inputs which guide this research to develop the actual questionnaire for the main study The study discusses the factors causes expected attributes and importance of allowing undergraduates to improve their generic skills through actual hands on participation Rasch Measurement Model s software WinStep is used to analyze the raw data In experimental test students are provided with opportunities to practise how to deliver the SRS by doing several case studies from the software industry The analysis and results have shown a positive improvement of the generic skills among the students who were involved in the Requirement Engineering Project Based Learning RE PjBL model environment compared to those who were taught the course by traditional methods with minimal cost The results conclude that the RE PjBL which are facilitated by ELINS can enhance student s knowledge skills and attitude effectively
