Environmental Policy Analysis And Practice:

Environmental Policy Analysis and Practice Michael R Greenberg, 2008-03-13 Pressing environmental challenges are frequently surrounded with stakeholders on all sides of the issues. Opinions expressed by government agencies, the private sector, special interests, nonprofit communities, and the media among others can quickly cloud the dialogue, leaving one to wonder how policy decisions actually come about. In *Environmental Policy Analysis and Practice*, Michael R Greenberg cuts through the complicated layers of bureaucracy, science, and the public interest to show how all policy considerations can be broken down according to six specific factors: 1. the reaction of elected government officials, 2. the reactions of the public and special interests, 3. knowledge developed by scientists and engineers, 4. economics, 5. ethical imperatives, and 6. time pressure to make a decision. The book is organized into two parts, with the first part defining and illustrating each one of these criteria. Greenberg draws on examples such as nuclear power, pesticides, brownfield redevelopment, gasoline additives, and environmental cancer, but focuses on how these subjects can be analyzed rather than exclusively on the issues themselves. Part two goes on to describe a set of over twenty tools that are used widely in policy analysis, including risk assessment, environmental impact analysis, public opinion surveys, cost-benefit analysis, and others. These tools are described and then illustrated with examples from part one. Weaving together an impressive combination of practical advice and engaging first-person accounts from government officials, administrators, and leaders in the fields of public health and medicine, this clearly written volume is poised to become a leading text in environmental policy.

Knowledge, Power, and Participation in Environmental Policy Analysis Rob Hoppe, William N. Dunn, This volume probes practical dilemmas and competing research perspectives in environmental policy analysis. Scholars working in different fields, research traditions, societies, and policy domains offer significant insights into the processes and consequences of environmental policy making. Part 1, *Coping with Boundaries*, describes present-day conflict between experts and greater public participation in environmental policy. It shows that the institutionalization of increasingly complex environmental problems has led to a conflict between technocracy and democracy. Part 2, *The Transnational Challenge*, examines modes of cooperation between grassroots movements, scientists, and regional authorities in the United States and Canada. These and other modes of cooperation laid the foundations for the Great Lakes Water Quality Agreement, increased the effectiveness of air pollution treaties, and increased climate change. Part 3, *Bio Hazards: Policies and Paralysis*, deals with environmental problems closest to the everyday concerns of the public at large, because they have immediate implications for food safety and other values. Part 4, *The Citizens Perspective*, focuses on citizen vis-à-vis environmental policy, noting that in order to make policies work, citizens must be willing and able to participate in policy making and cooperate in implementing environmental choices. Part 5, *Confronting Ordinary and Expert Knowledge*, explores opportunities and constraints affecting public participation in evaluation of science. Part 6, *Developments in Research Programming*, addresses such questions as whether scientists still have opportunities to do the research they want.

without being interrupted or disturbed by policy makers and other stakeholders Part 7 Policy Sciences Aspirations explores different avenues for improving environmental policy Volume twelve in the PSRA series should inspire further investigations of the relations among knowledge power and participation in environmental policy It will be of timely interest to environmentalists policy makers scholars and the general public Matthijs Hisschemller is senior researcher at the Institute for Environmental Studies of the Free University in Amsterdam Rob Hoppe is professor and chair of the Policy Studies unit of University of Twente s Faculty of Public Administration and Public Policy William N Dunn is professor of Public Policy and Management in the Graduate School of Public and International Affairs University of Pittsburgh Jerry R Ravetz is director of the Research Methods Consultancy Ltd in London
