Technograph ,1948 **Physical Rehabilitation of Paralysed Facial Muscles: Functional and Morphological Correlates** Doychin N. Angelov,2011-02-21 Using a combined morpho functional approach the author recently found that polyinnervation of the neuro muscular junction NMJ is the critical factor for recovery of function after transection and suture of the facial nerve Since polyinnervation is activity dependent and can be manipulated he tried to design a clinically feasible therapy by electrical stimulation or by soft tissue massage First electrical stimulation was applied to the transected facial nerve or to paralysed facial muscles Both procedures did not improve vibrissal motor performance video based motion analysis of whisking failed to diminish polyinnervation and even reduced the number of innervated NMJ to one fifth of normal values In contrast gentle stroking of the paralysed vibrissal muscles by hand resulted in full recovery of whisking Manual stimulation was also effective after hypoglossal facial anastomosis and after interpositional nerve grafting The author concludes that manual stimulation is a non invasive procedure with immediate potential for clinical rehabilitation following facial nerve reconstruction **Manual of Child Psychology** Leonard Carmichael,1950 Catalog Pennsylvania State University,1906 *General Information and Announcements* University of Oklahoma,1919 Announcement, College of Engineering University of Colorado (Boulder campus).
