Effective Computational Geometry For Curves And Surfaces Mathematics And Visualization:

Effective Computational Geometry for Curves and Surfaces Jean-Daniel Boissonnat, Monique Teillaud, 2006-10-24

Computational geometry emerged as a discipline in the seventies and has had considerable success in improving the asymptotic complexity of the solutions to basic geometric problems including constructions of data structures convex hulls triangulations Voronoi diagrams and geometric arrangements as well as geometric optimisation However in the mid nineties it was recognized that the computational geometry techniques were far from satisfactory in practice and a vigorous effort has been undertaken to make computational geometry more practical This effort led to major advances in robustness geometric software engineering and experimental studies and to the development of a large library of computational geometry algorithms Cgal The goal of this book is to take into consideration the multidisciplinary nature of the problem and to provide solid mathematical and algorithmic foundations for effective computational geometry for curves and surfaces This book covers two main approaches In a first part we discuss exact geometric algorithms for curves and surfaces We revisit two prominent data structures of computational geometry namely arrangements Chap 1 and Voronoi diagrams Chap 2 in order to understand how these structures which are well known for linear objects behave when defined on curved objects The mathematical properties of these structures are presented together with algorithms for their construction To ensure the effectiveness of our algorithms the basic numerical computations that need to be performed are precisely specified and trade-offs are considered between the complexity of the algorithms i.e the number of primitive calls and the complexity of the primitives and their numerical stability Chap 3

Effective Computational Geometry for Curves and Surfaces Jean-Daniel Boissonnat, Monique

Teillaud, 2009-09-02 This book covers combinatorial data structures and algorithms algebraic issues in geometric computing approximation of curves and surfaces and computational topology Each chapter fully details and provides a tutorial introduction to important concepts and results The focus is on methods which are both well founded mathematically and efficient in practice Coverage includes references to open source software and discussion of potential applications of the presented techniques
