information generating a new level of public interest Textbooks were rewritten and scientists worked to understand the data during mission poor period that followed In recent times however we have entered a new era There has been a multinational effort to expand our knowledge of the Solar System Data from these missions has been freely shared and has again raised the level of public interest Within this era of renewed interest it is appropriate as is done in this book to provide the public with an effort to present an integrated view of our Solar System and questions that the discovery of extrasolar planets have raised with regard to the Solar System as a whole Professor Reta Beebe recipient of NASA s Exceptional Public Service Medal I understand this book to be aimed at a general audience but I can also see its use as a text in astronomy classes especially in a community school or situations where students typically resist reading the textbook The writing is light and entertaining and will engage students yet it thoroughly covers all the basic concepts of a typical Astro 101 class Dr Katy Garmany winner of the American Astronomical Society s Annie J Cannon Award *Exobiology in solar system exploration* Glenn C.
