Exploring Statisticspack Including Students And Teachers Notes:

MAA Notes ,1983 *Resources in education* ,1987 **Innovations in Teaching Statistics** Joan B. Garfield,2005 This is a book of stories about teaching statistics These stories are told by fourteen different instructors of innovative statistics courses who demonstrate that learning statistics can be a positive meaningful and even exciting experience Despite the prevailing opinion that statistics courses are dull and difficult for students these stories paint quite a different picture In the classes of the instructors whose stories fill this book students are engaged in learning are empowered to do statistics and appreciate the instructional methods of their teachers The instructors profiled in this book are inspiring dedicated teachers who have devoted considerable effort to creating courses and materials that enable students to successfully learn statistics Each chapter begins by describing how the author became a teacher of statistics then provides details about the courses they currently teach describing their teaching method textbook types of student assessments and uses of technology One typical class is described in detail to provide a snapshot of what each person s teaching looks like The writers then tell the story of the process they went through in developing an innovative course and conclude their chapters with a discussion of their future plans for course revision or development As you read these stories you will learn about some great activities some helpful technological tools and some innovative assessment methods By reading these stories teachers of statistics will understand and be motivated to try different ways to implement reform recommendations so that these recommendations may continue to lead to a variety of new materials activities and teaching approaches I hope that teachers of statistics may be inspired by these stories and feel encouraged to try new methods leave behind more traditional approaches to teaching statistics and carefully examine the effect of their teaching on student learning Publisher **Teaching Statistics** ,2000 A recent survey showed that for every student taking a statistics course in a statistics department more than three take such a course in a mathematics department but many math departments have no statistician on staff This instructor s manual was originally intended as a companion volume to math teacher workshops that addressed the issue but it may also be helpful to experienced teachers of statistics at the undergraduate or secondary level It includes classic and original articles on various aspects of statistical education as well as descriptions of innovative projects The text has no subject index c Book News Inc
