Exploratory Multivariate Analysis by Example Using R Francois Husson, Sebastien Le, Jérôme Pagès, 2010-11-15 Full of real world case studies and practical advice Exploratory Multivariate Analysis by Example Using R focuses on four fundamental methods of multivariate exploratory data analysis that are most suitable for applications It covers principal component analysis PCA when variables are quantitative correspondence analysis CA and multiple correspondence analysis MCA when variables are categorical and hierarchical cluster analysis The authors take a geometric point of view that provides a unified vision for exploring multivariate data tables Within this framework they present the principles indicators and ways of representing and visualizing objects that are common to the exploratory methods The authors show how to use categorical variables in a PCA context in which variables are quantitative how to handle more than two categorical variables in a CA context in which there are originally two variables and how to add quantitative variables in an MCA context in which variables are categorical They also illustrate the methods and the ways they can be exploited using examples from various fields Throughout the text each result correlates with an R command accessible in the FactoMineR package developed by the authors All of the data sets and code are available at <http://factominer.free.fr> book By using the theory examples and software presented in this book readers will be fully equipped to tackle real life multivariate data

An Introduction to Applied Multivariate Analysis with R Brian Everitt, Torsten Hothorn, 2011-04-23 The majority of data sets collected by researchers in all disciplines are multivariate meaning that several measurements observations or recordings are taken on each of the units in the data set These units might be human subjects archaeological artifacts countries or a vast variety of other things In a few cases it may be sensible to isolate each variable and study it separately but in most instances all the variables need to be examined simultaneously in order to fully grasp the structure and key features of the data For this purpose one or another method of multivariate analysis might be helpful and it is with such methods that this book is largely concerned Multivariate analysis includes methods both for describing and exploring such data and for making formal inferences about them The aim of all the techniques is in general sense to display or extract the signal in the data in the presence of noise and to find out what the data show us in the midst of their apparent chaos An Introduction to Applied Multivariate Analysis with R explores the correct application of these methods so as to extract as much information as possible from the data at hand particularly as some type of graphical representation via the R software Throughout the book the authors give many examples of R code used to apply the multivariate techniques to multivariate data

Interactive Spatial Data Analysis Trevor C. Bailey, Anthony C. Gatrell, 1995 A comprehensive data driven introduction to modern spatial data analysis a field which is playing an increasing role in many areas of research and policy making Provides full explanations for a wide variety of methods with illustrated with case studies Data sets for all the case studies are included on an accompanying computer disk together with a substantial interactive DOS software package for the display and analysis of spatial data
