Embodied Music Cognition And Mediation Technology:

Embodied Music Cognition and Mediation Technology Marc Leman, 2007-08-03 A proposal that an embodied cognition approach to music research drawing on work in computer science psychology brain science and musicology offers a promising framework for thinking about music mediation technology Digital media handles music as encoded physical energy but humans consider music in terms of beliefs intentions interpretations experiences evaluations and significations In this book drawing on work in computer science psychology brain science and musicology Marc Leman proposes an embodied cognition approach to music research that will help bridge this gap Assuming that the body plays a central role in all musical activities and basing his approach on a hypothesis about the relationship between musical experience mind and sound energy matter Leman argues that the human body is a biologically designed mediator that transfers physical energy to a mental level engaging experiences values and intentions and reversing the process transfers mental representation into material form He suggests that this idea of the body as mediator offers a promising framework for thinking about music mediation technology Leman proposes that under certain conditions the natural mediator the body can be extended with artificial technology based mediators He explores the necessary conditions and analyzes ways in which they can be studied Leman outlines his theory of embodied music cognition introducing a model that describes the relationship between a human subject and its environment analyzing the coupling of action and perception and exploring different degrees of the body's engagement with music He then examines possible applications in two core areas interaction with music instruments and music search and retrieval in a database or digital library The embodied music cognition approach Leman argues can help us develop tools that integrate artistic expression and contemporary technology

Towards a Meaningful Instrumental Music Education. Methods, Perspectives, and Challenges Andrea Schiavio, Luc Nijs, Dylan van der Schyff, Marja-Leena Juntunen, 2021-01-18

Embodiment of Musical Creativity Zvonimir Nagy, 2016-11-03 Embodiment of Musical Creativity offers an innovative look at the interdisciplinary nature of creativity in musical composition Using examples from empirical and theoretical research in creativity studies music theory and cognition psychology and philosophy performance and education studies and the author's own creative practice the book examines how the reciprocity of cognition and performativity contributes to our understanding of musical creativity in composition From the composer's perspective the book investigates the psychological attributes of creative cognition whose associations become the foundation for an understanding of embodied creativity in musical composition The book defines the embodiment of musical creativity as a cognitive and performative causality a relationship between the cause and effect of our experience when composing music Considering the theoretical practical contextual and pedagogical implications of embodied creative experience the book redefines aspects of musical composition to reflect the changing ways that musical creativity is understood and evaluated Embodiment of Musical Creativity provides a comparative study of musical composition in turn articulating a new perspective on musical creativity

Psychological

Perspectives on Musical Experiences and Skills Blanka Bogunović, Renee Timmers, Sanela Nikolić, 2024-06-20 Psychology of Music is a flourishing area of research in the Western Balkans. However, much of its findings and insights have remained relatively unknown outside the region. *Psychological Perspectives on Musical Experiences and Skills* features recent research from the Western Balkans foregrounding its specific topics, methods, and influences and bringing it into productive conversation with complementary research from Western Europe and further afield. The essays in this collection investigate the psychology of listening and performance and their relevance to music practice. Employing a range of research methodologies, they address divergent themes from a cross-cultural understanding of aesthetic experiences and innovations to attract new audiences to developmental perspectives on musical growth and the challenges of mastering performance skills. Authors reflect independently and collaboratively on how these psychological processes are shaped by the different traditions and geopolitical conditions inside and outside the Western Balkans. The result is a volume that emphasizes how musical experiences and practices happen not in isolation but in socio-cultural environments that contribute to their definition. This work will appeal to musicians, music educators, students, researchers, and psychologists with an interest in the psychology of music and exemplify ways forward in decolonizing academia. *Interpreting the Synthesizer* Nick Wilson, 2020-09-03 This volume examines the synthesizer's significance for music and culture with a range of contributors providing historical, musicological, practical, and theoretical perspectives. The synthesizer as an instrument has evolved rapidly over the last 50 years, conveying different meanings in musical culture at various times in its history. For example, post-punk and new wave acts used synths to signify their embrace of futurism and modernity. Earlier psychedelic bands used the instrument to sonically represent mind expansion, while prog acts signposted their lineage to the classical avant-garde. Techno artists used synths to escape the strictures of acoustic music in parallel with rave culture's desire for escapism from the mundanity of daily existence. It is now seemingly ubiquitous in modern pop music production. *Advances in Data Analysis, Data Handling and Business Intelligence* Andreas Fink, Berthold Lausen, Wilfried Seidel, Alfred Ultsch, 2009-10-14 Data Analysis, Data Handling, and Business Intelligence are research areas at the intersection of computer science, artificial intelligence, mathematics, and statistics. They cover general methods and techniques that can be applied to a vast set of applications such as in marketing, finance, economics, engineering, linguistics, archaeology, musicology, medical science, and biology. This volume contains the revised versions of selected papers presented during the 32nd Annual Conference of the German Classification Society (Gesellschaft für Klassifikation GfKl). The conference, which was organized in cooperation with the British Classification Society (BCS) and the Dutch Flemish Classification Society (VOC), was hosted by Helmut Schmidt University Hamburg, Germany, in July 2008. **The Expressive Moment** Marc Leman, 2023-12-26 A new way to understand expressive interaction focusing on the dynamic, fast, pre-reflective processes underlying interactions with music. The expressive moment is that point in time when we grasp a situation and respond quickly, even before we are aware of it. In this

book Marc Leman argues that expression drives this kind of interaction and he proposes a general framework for understanding expressive interactions. He focuses on the dynamic fast and pre-reflective processes underlying our interactions with music, whether we are playing an instrument, dancing, listening, or using new interactive technologies. Music offers a well-established domain for studying these fast and interactive processes, and Leman argues that understanding the power of expressive interaction through music may help us understand cognitive processing in other domains, including language, human action, coordination, human-animal interaction, and human-machine interaction. Leman regards expressive interactions with music as energizing and empowering. He argues that music is based on patterns that intervene with a reinforcing loop in the human brain, strengthening learning, motivation, and reward. He argues further that the reinforcing effect is influenced by the interaction flow by fast processes that handle expressive qualities on the fly. Leman sets out the framework in which expressive interaction is situated, describing among other things a pragmatic model of communication in which the fundamental components are enactment and dynamics. He looks in more detail at the cognitive-motivational architecture, discussing sensorimotor and motivational schemes. Finally, he discusses applications for the concepts behind expressive motivation in such fields as sports, entertainment, rehabilitation, multimedia, art, and music education.

The Routledge Companion to Embodied Music Interaction captures a new paradigm in the study of music interaction as a wave of recent research focuses on the role of the human body in musical experiences. This volume brings together a broad collection of work that explores all aspects of this new approach to understanding how we interact with music, addressing the issues that have roused the curiosities of scientists for ages to understand the complex and multi-faceted way in which music manifests itself, not just as sound but also as a variety of cultural styles, not just as experience but also as awareness of that experience. With contributions from an interdisciplinary and international array of scholars, including both empirical and theoretical perspectives, the Companion explores an equally impressive array of topics, including Dynamical music interaction theories and concepts, Expressive gestural interaction, Social

Analysis of the Embodied Cognition Process on People for Acquiring Music Skills Through Games-based Learning Katya Alejandra Alvarez Molina, 2021

Music has been present in human life creating a social connectedness originating changes in persons minds and moods and producing different reactions in the human body These reactions depend on personal experiences the body sense and physical stimuli auditory visual or tactile For instance unconsciously when people listen to a song they can move their feet in synchrony with the rhythm To acquire music abilities the synchronization between body and stimuli is fundamental either for rhythm or melody Nowadays technology supports the acquisition of music skills through the interaction between users and devices and opens the possibility of enhancing music engagement and cognitive motor affective and social skills To date people have their first contact with music through technologies such as video games e g Guitar Hero Rock Band One of the advantages of video games as a learning tool is the freedom of developers to add modify or suppress certain stimuli Therefore a video game can create different interactions movements and sounds where the music guides the player to take a specific action

Understanding the relationship between music and video games will help design effective and efficient games for music learning purposes However what is less clear is what effects interactivity movement and sounds cause in music perception due to the stimuli emitted by video games Therefore there is a lack of connection between the design of video games and the embodied music cognition where the cognitive sensorimotor social dispositions and capabilities of human beings are sometimes not considered The goal and leading research questions for this thesis are to explore how the different stimuli emitted by a music video game change the players performance Moreover how game elements of a video game can improve music learning and user experience This thesis seeks to understand the body reaction of players while playing music video games using different stimuli and analyze the game elements and mechanics for music learning Therefore two music video games are presented one game based on rhythms and one game based on pitch recognition The thesis presents two case studies using the rhythm game to analyze players reaction times and user experience with auditory visual or tactile stimuli A case study compares the user experience between players using a video game and players using a web application for the pitch game The results show that players performance is based on the game elements and not on the stimuli however auditory stimuli enhance their performance over other stimuli Moreover a possible learning effect was observed after some trials lives and was found a fatigue effect during the gameplay Using adequate game elements and mechanics can engage users in the activity at hand In conclusion human perception in video games is mainly focused on what the game shows visually however other stimuli impact the players performance Designing music game based learning must find a balance between the game elements and mechanics and music perception Consequently players would acquire music skills during the
