

C	Embedded C
Any desktop-based apps can be created using the general-purpose programming language C.	The programming language Embedded C is merely an extension of C, and it is used to create software for microcontrollers.
C is a straightforward language that is simple to read and edit.	The Embedded C language is difficult to read and change, making it difficult to use.
The C programming language's compilers are OS-dependent.	The Embedded C compilers are OS agnostic.
Fixing bugs in C language programmes is simple.	A software written in embedded C is challenging to bug fix.
When used, the C programming language also supports various other programming languages.	Only the processor that the application needs is supported by embedded C; other programming languages are not supported.

Prominence and Locality in Grammar Jianhua Hu, 2019-06-06 This book challenges the current consensus on the analysis of wh questions and reflexives from the perspective of the syntax semantics interface An integrated approach

incorporating analyses of the interaction between different levels of linguistic knowledge is proposed. It argues that the derivation and interpretation of wh questions and reflexives are not purely syntactic in nature but are regulated by principles operating at the syntax semantics interface. Two general principles underlying our knowledge of language and cognition are proposed in this work. One is the Principle of Locality and the other is the Principle of Prominence. It shows that although wh quantification and reflexivization belong to two different domains of study in generative grammar, their derivation and interpretation are basically constrained by the complex interaction between prominence and locality in grammar. The first part of the book discusses how wh questions are formed and interpreted in Chinese and English and shows that the formation and interpretation of wh questions are constrained by the interaction between prominence and locality. It is shown that in wh interpretation, prominence is used to define the set generators so as to license other wh words in the pair list reading in multiple wh questions. It also discusses wh island effects in English and Chinese and, unlike previous claims made in the literature (cf. Huang 1982a, 1982b), it argues that the so-called wh island effects in English are also observed in Chinese. The second part of the book investigates the role that prominence and locality play in reflexive binding. It is shown that in reflexive binding, the binding domain of the reflexive is defined by prominence. It proposes a unified account for both the noncontrastive compound reflexive and the bare reflexive in Chinese and shows that they are constrained by the same reflexive binding condition proposed in this work, though they employ different definitions of the most prominent NPs to determine their binding domains. *Prominence and Locality in Grammar: The Syntax and Semantics of Wh Questions and Reflexives* is an important theoretical contribution to the syntax semantics interface studies and can serve as a valuable text for graduate students and scholars in the field of Chinese linguistics and cognitive science. **The Syntax of Mauritian**
